TESTOMAT® EVO TH

DESCRIPTION

The Testomat® EVO TH automatically determines the water hardness by titration. It was developed from the Testomat ECO® and will provide you with a lot of new functions additionally to the approved functions which are: integrated SD card, firmware update via SD card and data transmission via WLAN access point and many more.

- Measurement parameters: water hardness
- Measuring range: 0.05 – 25 °dH water hardness
- Application: Universal for water treatment plants
- Menu navigation: German, English, French, Dutch, Spanish, Turkish, Chinese, Czech (others on request)

APPLICATIONS

- Monitoring the water quality of:
- Water treatment
- Water blending
- Drinking-water plants

REAGENTS

- TH2005
- TH2025
- TH2100
- TH2250

FEATURES:

- Optical recognition of water level when filling the measuring chamber
- Import and Export of settings (basic program data) with selectable filenames
- Logging on SD card for measurement data and notifications/alarms or optional SDHC Card (2GByte)
- Firmware update via SD Card
- graphic display (LCD)
- Simple switching between several menu languages
- Built-in self-test with ongoing Monitoring
- External reset / acknowledgment input
- Free programmable Password
- Automatic venting of indicator lines
- Monitoring of exceeding or underrunning of the lower (LV1) and upper limit value (LV2)
- Free programming of permitted number of water shortages (for systems with temporarily low water pressure)
